Tuberculosis Screening Questionnaire to be Completed by Incoming Students

Please answer the following questions:

Have you ever had a positive TB skin test?  □ Yes □ No

Have you ever had close contact with anyone who was sick with TB?  □ Yes □ No

Were you born in one of the countries listed below and arrived in the U.S. within the past 5 years?  (If yes, please CIRCLE the country)  □ Yes □ No

Have you ever traveled* to/in one or more of the countries listed below? (If yes, please CHECK the country/ies)  □ Yes □ No

Have you ever been vaccinated with BCG?  □ Yes □ No

* The significance of the travel exposure should be discussed with a health care provider and evaluated.

If the answer to all of the above questions is NO, no further testing or further action is required.

If the answer is YES to any of the above questions, Chapman University requires that your health care provider complete a tuberculosis risk assessment and appropriate testing prior to your enrollment at Chapman University. (See back of form).
Tuberculosis (TB) Risk Assessment by Health Care Provider

1. Does the student have signs or symptoms of active tuberculosis disease? Yes No
   If No, proceed to 2 or 3. If Yes, proceed with additional evaluation to exclude active tuberculosis disease including tuberculin skin testing, chest x-ray, and sputum evaluation as indicated.

2. Tuberculin Skin Test (TST)
   (TST result should be recorded as actual millimeters (mm) of induration, transverse diameter; if no induration, write “0”. The TST interpretation should be based on mm of induration as well as risk factors.)

   Date Given: Date Read:

   Result: ________ mm of induration    **Interpretation: positive    negative

   OR

3. Interferon Gamma Release Assay (IGRA)

   Date Obtained: (specify method) QFT-G QFT GIT other_____

   Result: Negative:    Positive:    Intermediate:

4. Chest x-ray: (Required if TST or IGRA is positive)

   Date of chest x-ray:    Result: normal:    Abnormal:

**Interpretation guidelines

>5 mm is positive:
  - Recent close contacts of an individual with infectious TB
  - Persons with fibrotic changes on a prior chest x-ray consistent with past TB disease
  - Organ transplant recipients
  - Immunosuppressed persons: taking > 15 mg/d of prednisone for > 1 month; taking a TNF-α antagonist
  - Persons with HIV/AIDS

>10 mm is positive:
  - Persons born in a high prevalence country or who resided in one for a significant* amount of time
  - History of illicit drug use
  - Mycobacteriology laboratory personnel
  - History of resident, worker or volunteer in high-risk congregate settings
  - Persons with the following clinical conditions: silicosis, diabetes mellitus, chronic renal failure, leukemias and lymphomas, head, neck or lung cancer, low body weight (>10% below ideal), gastrectomy or intestinal bypass, chronic malabsorption syndromes

>15 mm is positive:
  - Persons with no known risk factors for TB disease
